

## Math Activities

### Count your snacks

- Can you give me 15 goldfish?
- How many gummies do you have?
- If you have 10 candies, how many more do you need to have 15 candies?
- If you have 20 crackers and I take away 7 crackers, how many crackers do you have?

### Counting steps outside or inside

- How many steps does it take you to walk from your room to the front door?
- Who took more/less steps?
- How many more steps did you take than me? (20 steps-13 steps= 7 more steps)
- Who can get to \_\_\_\_\_ in less/more steps?

### Spatial relationship game (you just need one toy/object you can put in various places)

- Hide the toy/object somewhere and use positional words to describe where it is and have your child find it.
- Use words such as: on top, above, below, under, next to, in between, in front, behind
- Then switch and let your child hide the toy/object and use similar words to describe it

## Gross Motor Activities

### Sock throwing game (this is fun to play with two or more people)

- Roll 2 socks into a ball (make as many pairs as you want, the more socks, the more fun!)
- Throw the paired socks around in an open space (e.g. living room, front yard, etc.)
- Have a laundry basket (or something you can throw the socks into)
- Start a timer, see how long it takes to throw all the socks into the basket
- When you're done, start again. Can you beat your time?

### Paper ball games (throwing & kicking games)

- Crumple up paper into a ball (make as many balls of paper as you want)
- Grab a basket or bucket
- **Throw** the paper ball into the basket (more fun if someone is holding the basket trying to catch the paper ball). How many paper balls can you get in the basket?
- Another game, **kick** the paper ball into a goal (use a basket or mark a goal space). Who can get the most balls into the goal?
- **COMPETITION:** Two or more people needed to play. Set a timer. Who can throw the most balls into the basket? Who can kick the most balls into the goal?
